

NEOMATIC
INNOVATIVE CONVEYING SOLUTION

Grain & Flour Conveying System

WE NEVER FORGET HOW MUCH YOU RELY ON

CH^{YAL}

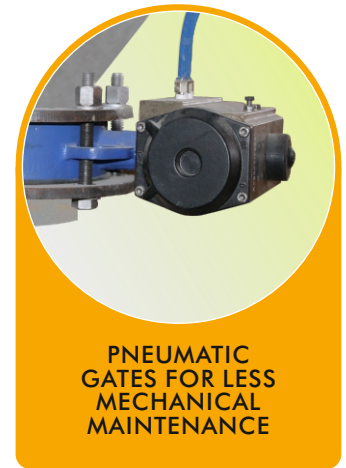

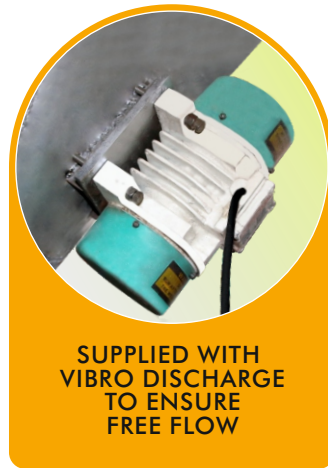

We have innovated fully Digitally Operated Pneumatic Conveying Systems named and styled as **NEOMATIC** for the conveying of Flour and grain in higher capacity with lower power consumption. An innovative and power saving Pneumatic Conveying Systems for Flour Mill & Food Industries.

Experience and expertise are what make Choyal the perfect partner for companies with in the food industry. With a unique range of special solutions for Grain and Flour handling applications, no wonder Choyal is the first choice.

NEOMATIC - A pneumatic conveying system transfers Flour, granules and other dry grains through an enclosed pipeline. The motive force for this transfer comes from a combination of pressure differential and the flow of air. The system's basic elements include a motive air source a feeder or similar material-introduction device, a conveying line, a termination surge bin (such as an air-material receiver), and a dust filter system. While some of the most common materials transferred by pneumatic conveying systems are flour, besan, spice, and hundreds of food products.

The Advantages Of This Technology Are:

- Power Saving
- High loading - less air required for conveying
- Lower conveying speed - reduced damage to product
- Low conveying speed - reduces or completely eliminates fat deposits in the conveying pipe.
- Less cleaning required
- Minimum Environmental Loss
- Chocking of Ducks, Cyclones and Filters eliminates
- Low headroom
- Cyclones, Filters, Airlock, Ducts OTS Chimney and are not required.
- Covers Long Distance
- Smaller Dia Pipes Required less air
- Fully automated with digital touch screen panel
- Low at sound keep your flour mill working condition ergonomic.
- Flow and Batch Process Control.
